A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in California, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&Rs' interactions with parents and providers.

For a copy of the 2007 *Portfolio*, including county data pages, visit www.rrnetwork.org.

Amador County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Amador County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

Butte County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Butte County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

Contra Costa County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Contra Costa County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Fresno County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

Inyo County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Inyo County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Lake County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

Marin County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Marin County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

Merced County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Merced County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

Monterey County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Monterey County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

Orange County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Orange County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Placer County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Sacramento County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in San Diego County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

For a copy of the 2007 *Portfolio*, including county data pages, visit www.rrnetwork.org.

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in San Luis Obispo County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

Santa Cruz County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Santa Cruz County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

Siskiyou County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Siskiyou County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Stanislaus County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

For a copy of the 2007 *Portfolio*, including county data pages, visit www.rrnetwork.org.

Tulare County

by the numbers

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Tulare County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.

A decade of data about child care in California counties

Locally-based child care resource and referral programs (R&Rs) are located in every county in California. Their services have evolved over 30 years—from a grassroots effort to help parents find child care, to a well-developed statewide system that supports parents, providers, and communities to find, plan for, and develop quality child care that is affordable and accessible.

In 1997, following a two-year effort to standardize the data collection of the 61 R&Rs across the state, the California Child Care Resource & Referral Network launched the first *Child Care Portfolio*, a report which documented child care supply and demand, and portrayed the trends and needs of real families as they struggle to find appropriate, quality care for their children, especially as they juggle work and family. *The Portfolio* has been produced biennially since that time. The information presented here offers a picture of the supply and demand for child care in Yolo County, as well as relevant demographics about children and families. The data reflects the most up to date information available and comes from a variety of sources, including the R&R's interaction with parents and providers.
