As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

1. Data from local child care R&R programs, January 2008; compiled by California Child Care Resource & Referral Network.
2. Requests for child care referrals received by local R&R programs, April/May/June 2008.
3. Preschool age defined as 2-5 years old, consistent with Title 22 regulations, Community Care Licensing, DSS.
4. Licensed facilities receiving vouchers and licensed family child care homes with government contracts not included.
5. Includes general child care, migrant, latchkey, campus, and severely-handicapped programs.
6. Full-time: 30 or more hours per week; part-time: less than 30 hours per week.
Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Humboldt County

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family. Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Mendocino County

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

6. Full-time: 30 or more hours per week; part-time: less than 30 hours per week.
Mono County

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Community Resources for Children
(707) 253-0376  www.crcnapa.org
As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Data that describes child care – statewide and in California counties

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

The 2009 Child Care Portfolio is produced by the California Child Care Resource & Referral Network | (415) 882-0234  www.rrnetwork.org
As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family. Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. 5. Includes general child care, migrant, latchkey, campus, and severely-handicapped programs.  
6. Full-time: 30 or more hours per week; part-time: less than 30 hours per week.  
As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. **Data that describes child care – statewide and in California counties**

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family. Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

The 2009 Child Care Portfolio is produced by the California Child Care Resource & Referral Network | (415) 882-0234 www.rnnetwork.org
Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Child Care Referral & Education
www.shastalink.k12.ca.us/cre
As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Data that describes child care – statewide and in California counties

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Data that describes child care – statewide and in California counties

As it prepares to celebrate its 30th anniversary, the California Child Care Resource & Referral Network proudly presents its seventh biennial compilation of child care data for the state and for each of California’s 58 counties. For 30 years, child care resource and referral (R&R) programs have worked with families, child care providers, and policymakers. These ‘on-the-ground’ relationships have enabled R&Rs to collect data about child care supply and demand, and to understand the concerns of parents and providers.

Child care request data is gathered from the tens of thousands of calls made to R&Rs across the state, as families attempt to locate appropriate child care. Parents often request specific types of care based on location, language, or work schedules. These calls represent an important sample of families and their needs. However, not all families who need child care contact their local R&R. Parents get information from many sources, including friends and family.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008). Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.

Information about the supply of child care is based on R&R databases of active, licensed providers (as of January 2008).

Census and other demographic information included in the 2009 Child Care Portfolio are intended to complement the R&R data and to set the stage to better understand the need for child care.

The California Child Care Resource & Referral Network – with the local R&Rs – recruits and trains providers; advocates for quality, affordable, and accessible child care; and documents child care supply and demand. The data provided here is intended to support the continuing efforts of R&Rs, families, providers, and policymakers as they consider the critical role child care plays in society. For copies of the 2009 Child Care Portfolio for each county and for the state of California, visit www.rrnetwork.org.
