

Child Care Data Tool

What is it?

The Child Care Data Tool offers a comprehensive look at child care supply and demand across every county in California—as well as statewide trends—dating back to 1996. All in one place, you can explore changes over time and easily access data for your county or the entire state. The tool is designed to be user-friendly, helping you find the data you need quickly and accurately.

Where do the data come from?

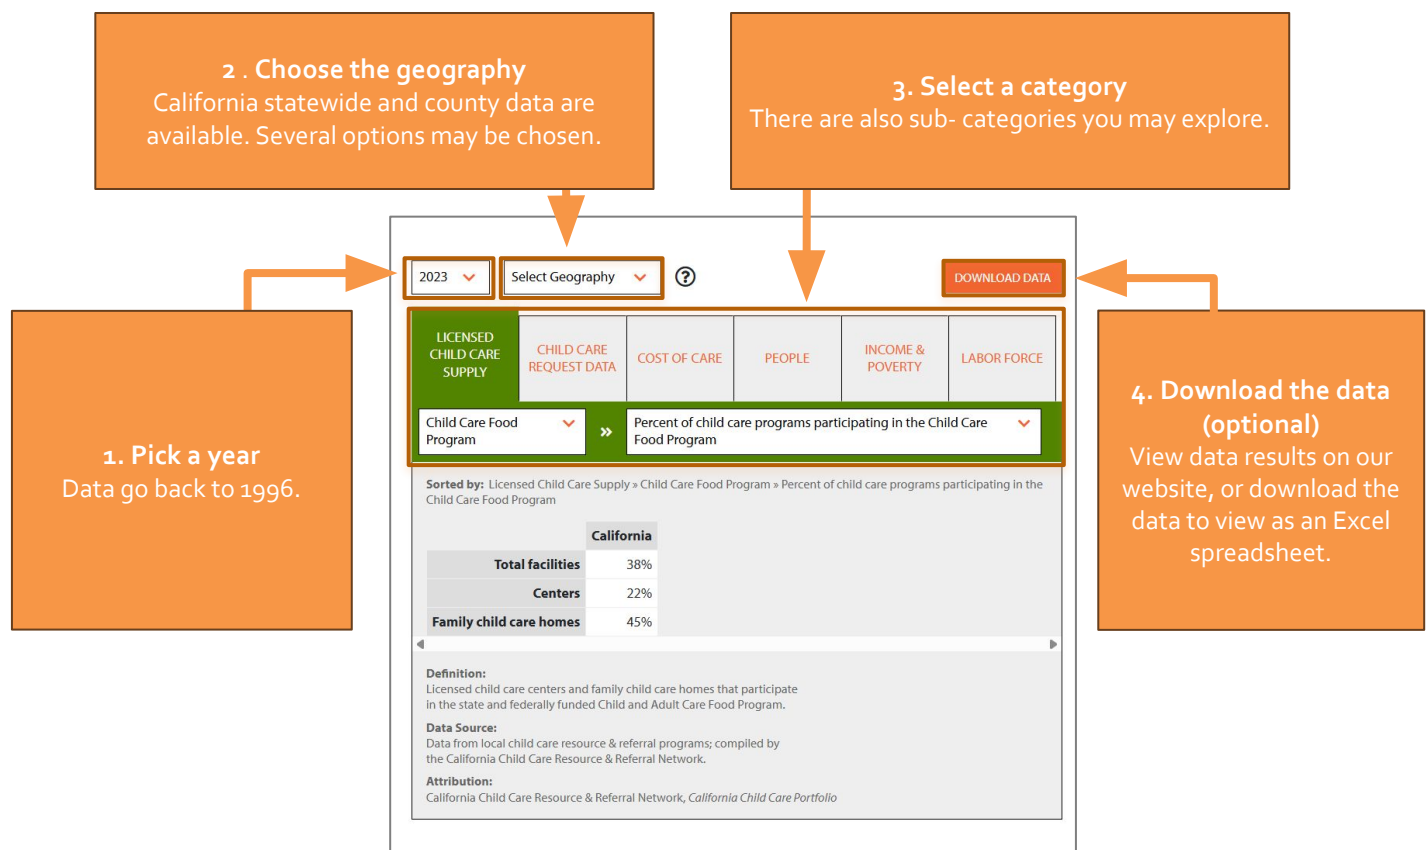

The child care data are gathered with the assistance of local child care resource and referral (R&R) agencies and combined with child care cost data and child and family demographics. It has been relied on by policymakers, business leaders, health care professionals, educators, planning agencies and child advocates to understand the child care needs of California families.

What can you use the data for?

The data can help you evaluate child care needs, opportunities, and strengths in your county. It can also be a tool to inform others on the child care landscape in your community. What stories will you tell with the data?

How do you use the tool?
